

Plenum Raceway System

TELECOM OUTSIDE PLANT

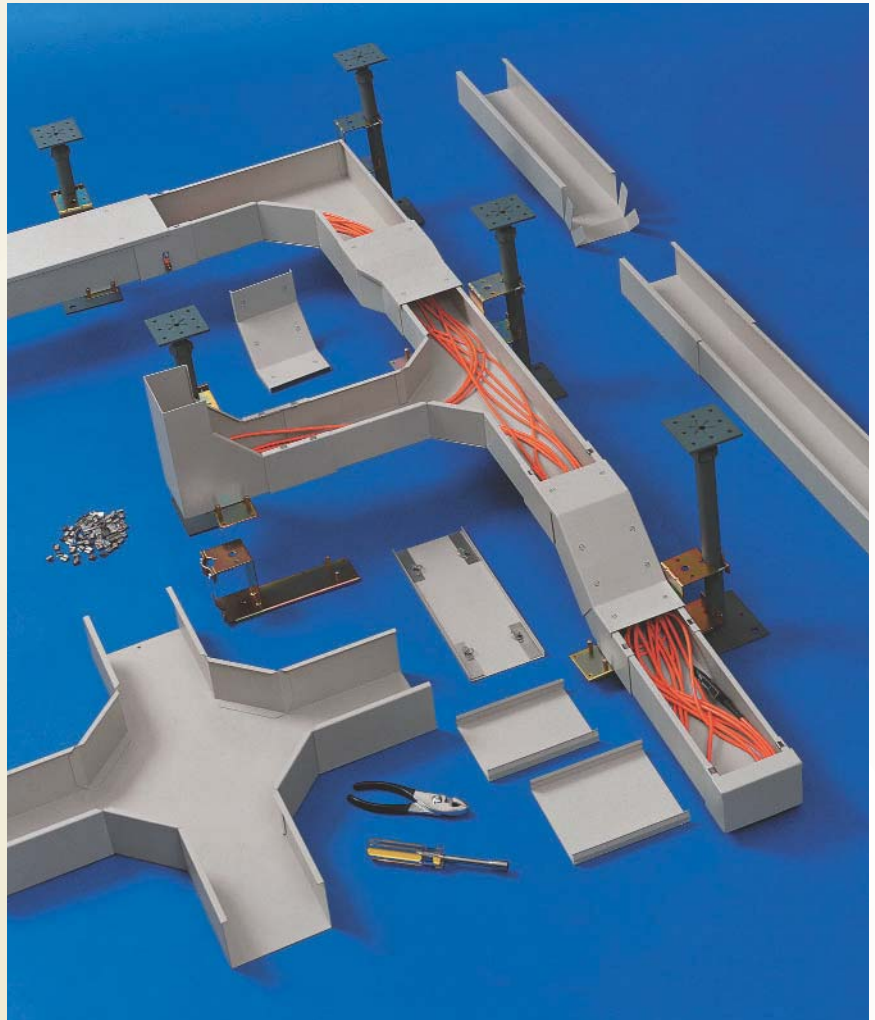

Fibertray plenum raceway system is a revolutionary cable management tool designed to assist in optical cable management. The all metal design protects cables from sagging and micro bends, two conditions associated with fiber optic cabling. Fibertray raceway systems mount beneath existing raised floors without the need for external support structures.

The Fibertray raceway system has a patented telescoping feature which allows the user to configure, install, or expand the system without cutting any sections. This reduces the installation costs and enhances the applicability of the system. The Fibertray raceway system has the ability to join sections without screws, bolts, adhesives, or stiffeners further increases functionality.
